These two volumes are an edited record of the informal dialogue of eminent scientists concerned with deciphering the histories of Mars and the moon from Mariner photos of the surface and the return of the Apollo rocks.
What do the recent data from the solar system imply about the origins of life? Could life have originated and survived elsewhere?

Zeitschrift für Physik

has since 1921 been publishing research reports of fundamental importance in physics. Its high reputation has attracted leading authors and a worldwide readership. To concentrate publication efforts, Z. PHYSIK will be issued in two separate parts starting in 1975, so that papers dealing with related subject matter can be grouped together.
Z. PHYSIK A (Atoms and Nuclei) will be devoted to atomic and nuclear physics; Z. PHYSIK B (Condensed Matter and Quanta) will deal with the physics of condensed matter and quantum phenomena. Parts A and B will each have separate editorial boards, but they will be coordinated by O. Haxel as editor in chief.
Z. PHYSIK A begins with Volume A 272; Z. PHYSIK B begins with Volume B 20, since it supersedes the journal PHYSICS OF CONDENSED MATTER which will cease publication with volume 19. Either part can be ordered separately.
